THE WORK OF MILITARY FORCES IN THE CONTEXT OF THE COVID-19 CRISIS

AFRICA, LATIN AMERICA and EUROPE

Nº2 | July 2020
• On March 11, 2020, the World Health Organization declared the new coronavirus SARS-CoV-2 outbreak a pandemic. By then, the virus was already spreading worldwide and had turned into a global problem. It was precisely the close connection between countries in a globalized world that caused an impact on so many people, across all continents, in such a short time. Against this backdrop, as was already pointed out in the previous Newsletter, the armed forces were called upon to play a role in response to the crisis.

The exponential spread of the disease has led to the implementation of risk management systems in various countries and, in many cases, the armed forces have been deployed due to their quick response and logistic support capabilities. This same situation has been evident in various regions of the world, where the armed forces have been involved in supporting systems, delivering food to people and patrolling areas, among other actions. In this context, it is worth reflecting on their role, particularly the capabilities required for them in order to deal with these types of scenarios and, above all, on the importance of coordination, both at national and international levels. The information below describes the scenarios observed in various parts of the world and depicts some contrasting cases, including Argentina, Bolivia, Brazil, Burkina Faso, Chad, Chile, Colombia, Costa Rica, the Dominican Republic, Ecuador, El Salvador, France, Guatemala, Honduras, Mali, Mexico, Niger, Nigeria, Panama, Paraguay, Peru, Portugal, Spain, the United Kingdom, Uruguay, and Venezuela.

What actions are being taken by the armed forces?

Indicators of the actions taken by the armed forces relies on the promotion of their activities in data published on their official social media accounts. The data presented below shows the actions posted between March 10 and May 18th for the above-mentioned countries. It is divided into three general areas: assistance to health-care systems, public order maintenance and direct support to populations. These general categories and the actions taken under each of them allow for further research in order to lay the foundations for the development of response protocols for other health-care crises, especially as regards to the training of personnel.

The eminently global nature of this threat demands urgent international coordination to offer an adequate response. However, analysis shows that countries have failed to coordinate with each other in most of their decisions. When we observe what has occurred in Latin America and the countries under analysis in Europe and West Africa, it is clear that response strategies were deployed urgently and the use of the armed forces was defined according to national needs and operating capabilities. Countries whose military forces have more developed logistic capabilities have tended to engage in a more significant transportation of medical equipment and personnel. In countries affected by food insecurity, the role played in relation to food delivery actions was recurrent. When mandatory lockdown was implemented, the need to have personnel available to enforce this measure led to the involvement of the military in patrols as well as checkpoint security activities.
The work of military forces in the context of COVID-19 crisis

If all of the cases reviewed in this paper are taken into account, including countries from Africa, Latin America and Europe, the percentage where the armed forces played a role in each of the categories is as follows:

Assistance to health-care system. Percentage of countries where the armed forces undertook each of the above-mentioned actions.

Assistance to health-care systems has been the main activity carried out by the armed forces within the context of COVID-19. Their logistics and quick response capabilities, combined with the availability of personnel, make the armies, navies and air forces strategic partners in the response to the current crisis. Assistance in the delivery of medical and strategic equipment is the most frequent task undertaken by the military. In several countries, the armed forces have also been involved in manufacturing personal protection equipment, which is key in the context of global scarcity of such items.

Although the police and security forces are generally responsible for enforcing law and order, it is common to have legal mechanisms in place that allow for the involvement of the armed forces in these tasks in exceptional cases. Due to the SARS-CoV-2 outbreak, several countries have implemented measures for social isolation. In some cases, such as Spain, the measures were implemented nationally, and disobedience was penalized with fines. On the other hand, in Brazil, the federal government has not enacted mandatory isolation measures, but some states and cities have shut down non-essential businesses and institutions. In some cases that required isolation, the armed forces were entrusted with the responsibility of enforcing the rules. Also, in places with restricted movement of people within a national territory, the use of the army at checkpoints was recurrent.

The protection of strategic locations, such as hospitals and medical depots, was also conducted by the armed forces in countries like France and Colombia. Finally, the army was also responsible for securing the borders in cases when the movement of people was restricted.
As for assistance to the population, the main tasks have been food and water distribution as well as repatriation, among others.

Type of actions taken by the armed forces in relation to COVID-19. Average of all selected countries (%)

- Food and drinking water distribution: 22%
- Assistance to health-care system: 45%
- Public order/Borders: 5%
- Other: 28%

Source: Compiled by the authors based on daily social media publications of the Armed Forces from the various countries from March 10 to May 1.
In general, the armed forces have been quite active in conveying information and showing the activities that were undertaken. In addition to the guidelines drafted for the population, they have also published their actions to fight coronavirus. The following charts illustrate the most active topics in each region.

**Activities published by the Armed Forces in response to COVID-19**

- **Support to health-care system**: disinfection of locations with high circulation of people; prevention campaigns; deploying and setting up of medical tents, temporary hospitals and quarantine centers; transport and distribution of medicines, biomedical equipment and medical supply; production of personal protection equipment; among others.
- **Food and drinking water distribution**: delivery of rations, food boxes and purified water to communities in need.
- **Public order/Borders**: maritime, air and land patrols; border controls.
- **Other**: repatriation of nationals; disinfection of military facilities; coordination meetings; among others.

**Source**: Official Twitter accounts of the armies, air forces and navies of: Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica (Public Force), Ecuador, El Salvador, Spain, France, Guatemala, Honduras, Mexico, Panama (Aeronaval Service), Paraguay, Portugal, United Kingdom, Dominican Republic, Uruguay and Venezuela. Facebook accounts of Burkina Faso and Mali’s Armed Forces. From March 10 to May 18.

Case studies - the actions taken by the Armed Forces against COVID-19 during the first two months after declaring the global pandemic.

Nigeria

Nigeria is a relevant country in terms of regional context, with a population of more than 190 million inhabitants. The first confirmed case of COVID-19 was an Italian citizen in Lagos. On March 9, the second case was confirmed in Ewekoro, in the province of Ogun, only this time it was a Nigerian citizen.

While COVID took longer to spread in Africa than in Europe or Latin America, the armed forces still played an important role. In the case of Nigeria, they had already been deployed for internal order maintenance in relation to attacks of Boko Haram. The emergence of coronavirus demanded additional tasks in terms of providing the air transport of health-care equipment and personnel, training personnel, monitoring the distribution of palliative care supplies and setting up facilities to support the Government’s effort at isolation centers.

The response to coronavirus has been coordinated by the Presidential Task Force on COVID-19, a coordinated and multi-sector effort mostly comprised of civilian sectors.

Some statistics:

- 27 March: The Air Force provides liquid oxygen to hospitals.
- 29 March: First presidential address on the issue of COVID-19.
- 30 March: Lockdown begins in some states.
- 05 April: The Army distributes essential supplies to various institutions, including an orphanage in the province of Edo.
- 07 April: The Army enforces compliance with the lockdown policy.
- 10 April: The armed forces manufacture personal protection equipment and facemasks for the health-care personnel.
- 13 April: The Air Force transports medical support equipment.
- 15 April: Production of equipment on COVID-19 and repair of existing ventilators.
- 17 April: The Air Force creates a workshop to manufacture facemasks.
- 21 April: The Air Force distributes palliative supplies.
- 22 April: Transportation of CDC staff to meet with regional leaders.
- 23 April: The Air Force provides training for flight nurses.
- 06 May: Donation of personal protection equipment.
- 18 May: The Air Force continues the transport of medical supplies and personnel.
- 21 May: The Armed Forces offer facilities to conduct actions against COVID-19 and to train personnel.

As of May 16, the Air Force had flown 300 hours to carry medical equipment and supplies, as well as medical personnel and government officials country-wide.

Left: Donations for communities in Lagos, Enugu, Yenagoa and others. Right: Donation of personal protection equipment and other kits to the administration of the Federal Capital Territory.

In response to the health-care emergency, military personnel have been deployed to support other state institutions in matters such as the delivery of food rations, setting up of temporary shelters, supply of essential goods, medical evacuations and actions related to citizen security in support of the National Police. The conduct of the operations is under the responsibility of five Operational Commands deploying over 31,000 members of the Armed Forces.

Given the critical situation in the province of Guayas, particularly in Guayaquil, the province was declared a Special Safety Zone (Decree N° 1019), and a Joint Task Force (FTC, Spanish acronym) made up of 5,200 members of the military, the National Police, the Traffic Commission and the City Traffic Agency was created. About 2,600 military members joined the FTC and performed various tasks, such as restricting pedestrian and car movement, as well as the collection and transportation of bodies. The JTF was decommissioned on May 15 by Decree 1052.

**ECUADOR**

**29 February** First COVID-19 case.

**11 March** A State of Health Emergency is declared.

**13 March** The National Emergency Operations Committee is activated (COEN-N).

**14 March** The Armed Forces, jointly with the Police and Customs, began to control the entry of foreign citizens at the International Lalamor Bridge, and later closed this border crossing.

**16 March** State of emergency due to public calamity is declared for 60 days, and a curfew is established (Decree N° 1017).

**18 March** The Armed Forces are deployed nationwide to enforce the curfew.

**20 March** The Air Force makes a humanitarian repatriation flight to Chile. Binational Meeting between Ecuador and Colombia for the control of illegal crossings in the northern border.

**23 March** The Province of Guayas is declared Special Safety Zone and the “Guayas” Joint Task Force is created (under Executive Decree N° 1019).

**27 March** The Air Force establishes an air bridge with the Galapagos Islands, to deliver essential products and protective medical supplies.

**1 April** The Air Force carries essential products and medical supplies from Quito to Guayaquil.

**3 April** The Air Force establishes the second air bridge to carry provisions and medical supplies to Guayaquil.

**4 April** Ecuador and Peru coordinate actions to control the spread of the virus in the northern border.

**6 April** The Army assists in the land transportation from Quito to Guayaquil of a mobile hospital donated by the Red Cross.

**16 April** The Army assists in setting up COVID-19-specific medical tents for the IESS Quito Sur Hospital.

**14 May** The Armed Forces conduct patrolling operations at the northern border crossing.

**15 May** The state of emergency is extended for 30 days. The special security zone and the Joint Task Force of the Province of Guayas are deactivated (Decree N° 1052).

**18 May** The Armed Forces deliver food, antibacterial gel and facemasks to older people in various locations.

**TOTAL PERSONNEL DEPLOYED DURING THE HEALTH-CARE EMERGENCY: 31,426**

- Support to security in 6 activated logistical corridors
- Security provided to over 168 supply convoys
- Support to the delivery of 255,305 food kits.
- Setting up of 4 climatized tents for medical support at the IESS
- Assistance in the control of 890 supply centers
- Disinfection of 405 outdoor areas and places
- 199 emergency support flights
- Air evacuation of 27 patients
- 536 flight-hours in emergency support operations
- Assistance in the control of 800 supply centers
- Security provided to over 100 supply convoys
- Support to the National Police in control operations at social rehabilitation centers and in movement restriction operations. 51,471 kilos of food and medicine transported by air. (Statistics to May 25).

The work of military forces in the context of COVID-19 crisis

PEACE MISSIONS AND EPIDEMICS: THE CASE OF THE URUGUAYAN CONTINGENT

What happens with the work of military forces when epidemics and pandemics break out in the context of a peace mission? Since 2018, the Democratic Republic of the Congo has experienced new Ebola outbreaks, resulting in 2,280 deaths out of a total of almost 3,500 cases up to mid-June 2020. In March this year, COVID-19 struck and caused almost 6,000 confirmed cases to date. Both viruses added further challenges to what is now one of the most protracted and critical humanitarian conflicts in the world. In this scenario, where the United Nations established its MONUSCO operation, the Uruguayan troops carry out their task as part of the mission.

The 2018 Ebola outbreak

Ebola, possibly one of the viruses worst feared by humanity because of its lethality, reappeared in the Democratic Republic of the Congo in mid-2018 with an outbreak in the town of Butembo, North Kivu Province, with an estimated population of 670,000. At the time, the World Health Organization (WHO) deployed medical teams to care for the sick and prevent the epidemic from spreading to other areas.

Paradoxically, health workers were attacked on several occasions, medical facilities were vandalized, and their personnel threatened with death. Violence peaked on 19 April 2019, when Dr. Richard Mouzoko (Cameroon) was murdered by a group of angry locals while treating patients in the Butembo University Hospital. In May, a health worker was killed, and a clinic was looted in an area located east of Butembo.
The work of military forces in the context of COVID-19 crisis

The aggressive rebel groups operating in the area – mainly Mai Mai and ADF (an extremist Islamic group considered as a terrorist organization) –, acting through agitators, led people to believe that Ebola was a disease spread by foreigners or a scam operated by the world powers in order to get hold of national riches. This exacerbated the feelings of the local population against international NGO’s and any other institution representing international aid. In this context, the frequency and lethality of the attacks was affecting the struggle against the epidemic. “The tragedy is that we have the technical means to stop Ebola but, unless the attacks cease, it will be very difficult to put an end to this outbreak”, tweeted the WHO Director General on 10 May. “The security challenges are twofold: the armed groups that have been present in the region for decades, and the hostility of the community, which went from attacking facilities to assaulting the workers”, stated the Deputy Director of Mercy Corps in DRC, in an interview with the BBC.

In this context, which included the risk of the virus spreading to the whole Great Lakes region, WHO asked for MONUSCO’s help to improve the security of the humanitarian workers. Thus, URUBATT was instructed by the MONUSCO general command to deploy a company in order to stabilize the area of responsibility in Butembo.

In the Beni-Butembo area of responsibility, 3,371 cases of Ebola were reported, with a total of 2,266 deaths (70.25% lethality).

Deployment of the Uruguayan Infantry Battalion IV Delta Combat Team

The first Uruguayan contingent renewal flight arrived on 5 June 2019, carrying 146 military personnel. One week later, many of them were being deployed in the locality of Butembo. Their mission was to protect the personnel working in the area and support humanitarian workers to enable them to implement the health activities required to combat the Ebola virus.

The military personnel deployed numbered 150, who left the headquarters in the city of Goma and traveled to their destination in land vehicles. The 300 km trip took five days because of the extremely poor condition of the roads in the country.

Soon after URUBATT’s security and patrolling operations started, the hostilities against the health centers treating Ebola and the medical personnel died down, and the city of Butembo and its surroundings (estimated population: 670,000) returned to calm. By providing patrolling services on a 24/7 basis, URUBATT ensured security for the six Ebola treatment centers in the area (Itav Center, Vungi Center, Katwa Center, Graben University Hospital, Kikyo Hotel and Auberge Hotel). It also provided escorts for WHO medical personnel, Doctors Without Borders, United Nations observers, International Monetary Fund authorities, UNICEF, UN human rights agencies personnel and UNPOL.

The work of military forces in the context of COVID-19 crisis

Context:
- High level of violence from armed groups.
- Personnel in daily contact with Ebola treatment centers (all personnel were vaccinated).
- Providing security to the local population and health workers.
- Providing escorts.
- Patrolling services on a 24/7 basis.
- Engaging with humanitarian actors.

On 21 February 2020, URUBATT relocated to its headquarters in Goma, with the satisfaction of having accomplished their mission: in March 2020, no Ebola cases were reported. WHO had been ready to declare the Congo an Ebola-free area, but three days before, on April 10th, a new case appeared in the same area. The contingent’s work made it possible to successfully achieve the objective of protecting WHO, NGO and Congo Public Health personnel in Butembo while operating in a highly dangerous area, being exposed to the Ebola virus, patrolling day and night and protecting medical facilities. The contingent thus became an invaluable security asset in the containment of the virus in the Butembo area.

Facing the COVID-19 pandemic

Coexisting with a new Ebola outbreak since April 2020, COVID-19 can have extremely severe effects on the humanitarian and health situation in the DRC, a country persistently ravaged by decades of armed violence. Since 10 March 2020, the country has reported over 5,000 confirmed cases. “In regions such as Beni and Ituri, two of the areas most affected by Ebola which also endure the presence of a large number of armed militia, the spread of COVID-19 would have catastrophic consequences for health centers, which often rely on international aid”, said Geoffrey Denye Kalebbo, from World Vision DRC, who also mentioned the distrust of the local population during the Ebola crisis, describing it as “a resistance that led to attacks against the health services in 2019”.

The context is characterized by factors such as frequent and habitual population displacements from areas affected by armed conflict; violent attacks against medical personnel and facilities; the scarcity of health infrastructures; extremely limited resources; and the lack of safe water, sanitation, hygiene items, and preventive measures in homes and public areas. Most inhabitants live on a daily income, which implies that one day of confinement will probably make it impossible for them to obtain food and cover their basic needs. In addition, the State lacks sufficient capacity to provide the support required in these cases.

Available at https://www.elindependiente.com/vida-sana/2020/04/19/convivir-con-el-ebola-y-el-covid-19-el-congo-ante-el-peor-escenario-de-salud-publica-del-mundo/.
The work of military forces in the context of COVID-19 crisis

Current deployment of the Uruguayan battalion

Today, the major humanitarian emergencies and armed conflicts in the DRC are focused in the Great Lakes region, in the provinces of North Kivu, South Kivu, Katanga and Ituri. URUBATT is present in these provinces through deployments in the areas of Goma (North Kivu), Biakato (Beni-Butembo/North Kivu region), and Fataki (Ituri). In addition, it has installed water treatment plants in Goma, Bunia (Ituri), Uvira (Kivu South) and Kalemie (Katanga). These are areas suffering from severe shortcomings, where it is difficult to improve the population’s wellbeing in the short term because of the hostilities, criminality and insecurity that pervade the conflict areas.

URUBATT has a Female Engagement Team (FET) which is used as a tool to foster trust among, and proximity to, the local female population. It is very useful during deployments, since it deals with issues related to gender violence and sexual violence against local Congolese women and children. The FET has developed many activities, including food distribution, clothing distribution, awareness sessions on sexually transmitted diseases and COVID-19, familiarization meetings about general issues and first-level health care.

URUBATT is present at the core of the conflict and provides protection for the activities carried out by health workers (security tasks), deters the rebel groups from attacking civilians, and thus also helps to prevent massive displacements and attacks against medical personnel and health facilities treating COVID-19.

The activities carried out in support of civil society included the following:

- **Security**: The main missions of the Uruguayan Infantry Battalion IV are civilian protection and area stabilization. If the civilian population is protected, medical teams can work, schools can open and people can carry on with their economic activities. Security is the most pressing need of the local Congolese population.

- **Sessions on COVID-19 sensitization and preventive measures** for the local population: military personnel deployed in Goma, Biakatu and Fataki are carrying out temperature controls as part of the sanitary measures applied to stop the spread of this dangerous disease, and collaborate in the health campaign launched to prevent and combat coronavirus.
The work of military forces in the context of COVID-19 crisis

- Quick-impact projects: One example of this activity is the installation of an incinerator in the Provincial Referral Hospital in Goma. This project was crucial for health purposes, since it contributed to the creation of an adequate work environment for hospital employees and minimized the disposal of hazardous waste into the environment, thus decreasing exposure to diseases and improving sanitary conditions both in the hospital and the community.

- Another example is the solar panels project: Uruguay’s National Electric Power Plant and Transmission Administration (UTE) donated 10 photovoltaic solar energy systems, which were installed in the Tulizeni Center and the Amour Orphanage, both in the city of Goma. These institutions care for abandoned children aged 1 to 16, mostly victims of sexual violence and of the hostilities among local rebel groups.

- Donations: the distribution of donations consisting of food, mattresses, materials and clothing continued in Goma (Tulizeni Center, Happy Children Orphanage and Amour Orphanage), Fataki and Biakato.

- Water distribution from water treatment plants: water has been distributed to United Nations personnel, the Tulizeni home, Amour and Happy Children orphanages, the Referral Hospital in Goma, UNICEF Uvira, the Migration Department of Congo Bunia, the Congo Bunia Fire Department, the Bunia local prison, and the Migration Department of Congo Kalemie.

- Visits by multidisciplinary teams (physician, dentist, psychologist): the activities included sessions on awareness and prevention, hygiene measures, first level medical assistance and psychological support for the Tulizeni home and the Amour and Happy Children orphanages.

- Support through minor engineering works and repairs to infrastructure: carpentry, electricity, and plumbing jobs were performed in the Tulizeni home and the Amour and Happy Children orphanages.
How has the regulatory situation evolved?

In view of the crisis scenario, states have resorted to various regulatory provisions in line with the emergency situation. Measures range from the temporary suspension of rights, to the extended powers of the Executive Branch to take prompt action, to the greater permission to use public funds in a discretionary manner, and the declaration of a health-care emergency or mandatory social isolation. The following map illustrates the measures taken by countries in response to COVID-19.

</table>

In April 2020, the UN Secretary General released a report titled: “COVID-19 and Human Rights. We are all in this together”, which delivers six key human rights messages. Referring to one of these, which is that “the threat is the virus, not people”, the report states that “The pandemic has led to countries imposing emergency and security measures. While in most cases these are needed to fight the virus, they can also be politically driven and may be easily abused. The pandemic could provide a pretext to undermine democratic institutions, quash legitimate dissent or disfavored people or groups, with far-reaching consequences that we will live with far beyond the immediate crisis. Although coercive measures may be justified in certain situations, they can backfire if applied in a heavy-handed, disproportionate way, undermining the whole pandemic response itself.”

“States should be guaranteeing, in their crisis response, rights related to the use of force, arrest and detention, fair trial and access to justice and privacy, among others. Basic principles of legality and the rule of law must be observed.”
The Covid-19 pandemic is shattering myths and showing up startling and usually highly troubling realities in a vast range of elements of our societies. However, despite the often central role the various parts of the security sector are playing in facing the crisis, there is surprisingly little thought being given to the impact of the moment on the sector and by extension, on our societies themselves.*

What is the current state of play? The security sector, in an enormous variety of countries, especially those with relatively weak civilian state institutions, is engaging in a simply enormous range of activities assigned them, or taken over by them, in dealing with the pandemic. A list of such activities would be so extensive as to be almost impossible to draw up. And while the majority of the security services, such as the police, the fire service, national health services, and the like are merely increasing the intensity of their efforts in areas normally within their purview, there is one which is expanding massively outside its normal responsibilities.

This exception is of course the armed forces, and most especially the army. The armed forces have been asked to move into fields as varied as medical assistance and vaccination, protection of food convoys, evacuations of persons, cordonning off of affected zones, transport of medical support staff, setting up of concentration centres, military hospitals used by the civilian sector, emergency staffing of long-term care centres, taking over border controls at international or even internal border points, and a host of other missions.

This exceptional capacity to take over new roles in an emergency is of course usually the unique advantage of the armed forces, and especially the army, because that institution has automatically as part of what it is characteristics allowing such an expansion of missions: discipline, an organized chain of command and hierarchy, numerous and generally fit personnel, a distribution widely across the country’s territory, communications internal to the force, mobility, engineering skills, air, sea, and land transport, medical and dental services accustomed to emergencies, postal services, and many other logistical capabilities largely absent from other government institutions.

Little wonder then that in times of emergency the armed forces are called on to fill gaps in the overall state response. When added to this that those forces are trained to give flexibility to the

* Professor Emeritus of History and Strategy, Royal Military College of Canada. Member of RESDAL Board of Directors
state, and that they are armed, with all that means in times of crisis, it can hardly surprise us that their utility to government is obvious to all. What is perhaps not so obvious is the dangers that such an imbalance between security and civilian sectors of the state apparatus may bring about precisely because of this extraordinary need for them when crises arise.

In the specific context of this pandemic, the crisis arises when the political situation is already a complicated one, with widespread disorder present in much of the globe. Populist governments have come to power in situations of dubious constitutional legality with the return of the coup d’état, in a variety of old and new forms, joined by other upheavals dangerous for the fledgling democracies of many countries. And while repression was seen once again to be no answer for societal needs over the long term, it was often extremely useful in allowing governments time to see the immediate crisis through.

In an era already characterized as of insecurity, citizen and state, a pandemic such as Covid-19 arrived with a massive impact on governments and societies. In as dramatic an appeal as ever, once again the knock at the door of the barracks was heard and the armed forces responded. Again, little wonder that under such circumstances the military receive kudos from the general public, often richly deserved, for their unique and invaluable contribution to the state effort to mitigate the disaster.

But then what? Having proven their worth yet again, and garnered the public’s esteem and gratitude, they are no longer necessarily quite the same institution they were beforehand. Their budgets have normally increased substantially, the public’s contentment with their acting in normally civilian missions is reinforced, their power in cabinet and government is enhanced, and the imbalance between the power and influence of the military sector of the state over the civilian is further shifted in the military’s favour.

In the wake of this pandemic, this situation may be worsened by the economic depression, or at the very least recession, that virtually every economist sees as inevitable over the next extended period of time. Budgets for improving civilian sector emergency capabilities may well be far from generous. Ideas for new non-military state institutions to be able to better face future pandemics and natural disasters may find precious little funding.

Moreover, international support for such improvements may be difficult in the extreme to obtain, especially in the financial area, as a result of the growth of a nationalistic, go-it-alone approach so prominent during the current pandemic. Countries with weak civilian institutions may find themselves on their own, with highly serious economic challenges of the deepest kind, and unable to address reform issues whatever their desirability and stymied in finding assistance in doing so from traditional supporters of such reforms abroad.

For democracy, and the progress made with anchoring it in so much of the world in recent decades, the problem is visible but, as mentioned, little discussed and even less studied or addressed. It is vital that those interested in democratic civil-military relations, and the further progress of democracy in the world, take this issue seriously. It deserves immediate attention while we have the evidence of these threats clear in our minds. The military’s roles are ideally those of national defence and the capacity to assure that defence gives them special capabilities in the field of pandemics and natural disasters. But for the good of democracy, democratic states need to be wary of a further drift into weakened civilian institutions alongside strengthened military ones. Study of this phenomenon in order to deal properly with it is essential. The urgent must not be permitted to boot out the important.
Innovation in biosecurity management

María Noboa* and Diómedes Palacios**

Innovation in connectivity at the global level in the 21st century has given rise to unprecedented interconnection processes. Although this phenomenon has brought about multiple benefits, including in the economic and social areas\(^1\), it has also generated new risk factors and threats –biothreats– associated with high demographic growth rates and population concentration in cities. Should these risks and threats fail to be managed in due time, they may impair the governance of security in States and societies, with serious implications for every level of life.

The outbreak of COVID-19, which quickly generated a global pandemic, causing panic in the population as well as high mortality rates, has also revealed the limited capacities of states for strategic anticipation and epidemiological surveillance.

This situation clearly showed that the world is highly interconnected, that it is experiencing critical fractures and that power is condensed. In the coming years, the major challenge for modern societies will be to manage this interconnectivity through improved processes capable of linking needs and resources in an effective, binding and responsible manner. The discourse should project a social network that is more cohesive and more willing to address crises collectively. Public policies should be organized on a cross-cutting basis, allowing the processes to configure environments and individuals at micro, meso and macro level. People should establish local links, but without disregarding the global view of the world.

There is a strong and urgent need to build human and institutional capacities in the biosecurity area within specific legal frameworks. For this purpose, legitimation must be sought through international cooperation, in order to address a pandemic that has severely impacted the poor and people who are constantly on the move. The main challenge is to understand the quick geo-spatial proliferation of the aggressive behavior of this infectious and contagious disease and thence, the way it alters our biological security or biosecurity.

Additionally, from a prospective point of view, the challenge to governance reveals the need to understand the mutability not only of the virus but also of the threat and risk, and how this should be controlled by means of preventive and timely public policies and adequate courses of action, that is to say, through epidemiological surveillance. It may thus be seen that the present challenge requires domestic and international inter-agency actions based on the existing intercon-

The work of military forces in the context of COVID-19 crisis

Given the current asymmetries in early anticipatory processes, derived warnings and strategic prospective analyses about the pandemic, governments should develop prospective studies with the aim of determining the tools to be implemented and the measures to be taken in order to avoid catastrophic scenarios. In the next few years, a sustainable and cooperative approach will be crucial to appropriately handle the complex COVID-19 cycle. It is also necessary to process and learn from other countries’ experiences in this crisis, and to consolidate scientific and institutional policies in order to anticipate and strategically manage future crises.

Risk and threat reduction in the near future

Any decisions taken after the COVID-19 crisis should meet at least three requirements: timeliness (UNICEF, 2011)\(^2\), pertinence (Beisland, 2013)\(^3\) and creativity (Kimbell, 2009).\(^4\) The main decisions faced by governments involve the capacity to strengthen the internal mechanisms dealing with public management and anticipation, and enhancing the interoperability between governments and international organizations in order to prevent the threat from spreading and becoming a risk. In this line, the challenge faced by states is social in nature, since we as individuals must generate the sense and conscience for change as a learning opportunity to prevent a repetition of this crisis. The convergence between government actions and social attitudes should be geared towards a coherent projection of the future through the timely and pertinent management of threats and risks.

What is to be done? Faced with a future scenario of dynamic and severe risks, activities and spaces should be fostered where societies, responding to healthy state leadership, are oriented towards active, contingent, forward-looking, and sustainable attitudes. This will make it possible to anticipate future measures and act in a timely manner as required, in a spirit of advanced and comprehensive cooperation. On the other hand, plans articulated with a long-term vision should be developed with the aid of strategic intelligence as a major and concurrent tool. In Latin America, for example, plans and protocols that build upon this experience should be set up, so that future governments may be prepared to take adequate actions should such a crisis arise again.

The challenges are many and diverse. Each society should analyze and reflect on the events that occurred within its territory, how it faced the crisis and which lessons are to be learned across the world from the COVID-19 pandemic. Although each process within a crisis has its own features and characteristics, actors and decision-makers should take into account how the event began, the disorder and negation it brought about, and the stages of its intrusion, transvaluation and conclusion (Horowitz et al., 1979).\(^5\) Policy leaders should apply to each of these stages a creative, transdisciplinary and outspoken approach. A redefinition of concepts and their meanings is now required. This is a perfect opportunity to generate a debate on the concept of security and its components, as well as on the factors that alter it and cause security crises. Biosecurity and the new threats and risks, some of which are more solid than liquid or hybrid, are the emerging challenges for governments and for the world as a whole. From this point of view, intelligence and strategic prospective become the critical link that governments should address in order to achieve an optimum future where crises can be reduced, contained and countered.

The Spanish Armed Forces and the Balmis Operation

Blanca Palacín de Inza*

The homeland is not the men and women that people a country, or its trivial everyday affairs. Rather, it is the union of the past and future that comes to life in each concrete man—the tradition and the hope merging in the brief agitation of our mortal existence.1

Gregorio Marañón

Introduction

The Ministry of Defense of the Government of Spain named its operation against coronavirus “Balmis”, in honor of Francisco Javier Balmis, a physician born in Alicante (1753-1819). Balmis was the military doctor who led an expedition that saved the population of the New World and the Philippines—the overseas territories ruled by the Spanish Empire in the early 19th century—from the dreadful scourge of smallpox. Thanks to this little known achievement, smallpox is the only human disease to have been eradicated. And, now as then, the armed forces are actively involved in whatever tasks are needed to provide the highest level of safety and security to the society they serve.

Although this is a fact that unfortunately remains largely unknown, Spanish military health has often been at the forefront of its field. One example is the health organization of Spanish military units known as the Tercios, which not only proved its effectiveness in every battlefield, but can also be considered as the source of the present “social security”.2 But the clearest and most spectacular instance of a forward-looking endeavor, as well as of effectiveness, courage, humanity and science, is the Royal Philanthropic Vaccine Expedition headed by Balmis.

The Royal Expedition sailed from La Coruña on November 30, 1803. After carrying out vaccination activities in the Canary Islands and crossing the Atlantic, it touched Puerto Rico and went on to Venezuela, where it

*Analyst at the Spanish Institute for Strategic Studies. CESEDEN. Ministry of Defense of Spain.

split into two branches. One disseminated the practice of vaccination throughout South America and was led by José Salvany, deputy director of the expedition. The second branch was led by Balmis; it headed first to Cuba and then to Central America and Mexico. From Acapulco, the expedition crossed the Pacific Ocean and reached the Philippines. Later, after carrying out vaccination work in Canton, Macao and the island of St. Helena, the expedition returned to Spain, three years after its departure. 3

In order to take the vaccine to such a large number of places, the expedition transported the vaccine fluid through carrier children. The fluid was kept active through the successive inoculation of two children per week with the fluid taken from the vesicles of the subjects inoculated the week before. In other words, the vaccine was transported from arm to arm. Luckily for Balmis, the children were well looked after by Isabel Zendal, named by the World Health Organization (WHO) as the first nurse on an international mission.

The Spanish Armed Forces and the Balmis Operation

Inspired by Balmis and his desire to serve society, the operation undertaken by the Spanish Armed Forces to respond to the population’s needs in the context of the COVID-19 pandemic was named after him. And although the present military operation called Balmis does not—in principle—include in its functions that of vaccinating the population (hopefully, if a vaccine is found soon, this may also happen), the operation does assist and serve the population in the fight against the consequences of a powerful disease.

3 Manuel Guiote Linares, “Sanidad Militar. Un paseo por la Historia. Introducción”, 77-78
At times during the pandemic, more than 4,000 military personnel worked day after day in Spain to block the advance of coronavirus. Fortunately, this is not a war. We are not fighting an enemy, but a disease. This is a pandemic endangering our safety, and therefore all the tools and resources of Spain have been put to work to eliminate this threat and return to normalcy. The armed forces are one of those tools.

The Military Pharmacy, the Gómez Ulla Hospital, the Engineers units, the Military Emergency Unit, the Air Force, the Legion, the Navy, the Army and the Royal Guard, acting under the control of the political power as established by the Constitution, are working ceaselessly and risking their lives out of love for our society, which does not always appreciate them as it should.

The tasks performed are many and diverse: disinfection, food distributions, presence, security, patient transportation, training, bridge construction, field hospitals, installation of power generators, ablution facilities, etc. To avoid overwhelming the reader with figures, we will mention just one example: by mid-April, disinfection work had covered 1,353 elderly homes, 500 hospitals and health centers, 64 airports, 22 ports and 247 subway, train and bus stations.
The work of military forces in the context of COVID-19 crisis

MISSIONS ABDROAD
2020

> 2,800 military members

As of December 18th, the Council of Ministers approved the extension of overseas military missions where the Spanish Armed Forces are involved. These operations are performed in accordance with international obligations undertaken by Spain to the United Nations, NATO, the European Union as well as bilateral agreements signed with various countries, all of which have been approved by the General Courts, under the Organic Law on National Defense 5/2005.

As approved, Spain will be involved in several European Union missions during 2020, Bosnia-Herzegovina, Atlantic in the Horn of Africa, Somorka, Mali, Republic of Central Africa and UNFLOTAL EUFOR. Spain will continue to deploy Baltic Air Policing NATO. In addition, support operations will be maintained in Mali and the Republic of Central Africa, as well as the operation to fight Jihadist terrorism in Iraq.

Within the NATO framework, forces are still deployed in Afghanistan and as part of the Operation Resolute Support. The Mission of the NATO Resolute Support Mission in Afghanistan, and the Enhanced Force Structure in the Horn of Africa, which includes air policing in the Mediterranean and air defense support in Turkey. In addition, support will be given to the maritime security operation "Sea Guardian" in the Mediterranean, the standing naval forces in the Mediterranean and the North Atlantic, and the Enhanced Resilience Forces (ERF). Likewise, the participation of the EU Battlegroup Package Rapid Response Force is expected. The Government has authorized the deployment of the Military Emergencies Unit (UME) and the 43rd Air Forces Group aboard in the event of serious risks, situations, calamities or other needs, either in a bilateral framework or as part of the European Union Civil Protection Mechanism.

Source: https://www.defensa.gob.es/Galerias/gabinete/red/2020/01/infografía-misiones2020.pdf For higher quality infographic data, see:
In addition to the above, almost 3,000 personnel of the Spanish Armed Forces remain deployed in many operational areas, carrying out—as far as the virus allows—such missions outside our borders aimed at defending our freedom and security. This work is less obvious and has no visibility in the citizens’ ordinary life, but it is nonetheless essential.

### Final remarks

Although the Balmis Expedition of the 19th century fell into oblivion—an omission which perhaps we areremedying today to some degree—we trust that the Balmis Operation will not have the same fate.

Without the actions of the Spanish Armed Forces, many life-saving activities would not have been possible. In the present environment, which may be described as a VUCA context because of its volatility, uncertainty, complexity and ambiguity, the organizations capable of providing responses are those which are able to adapt. If countries lack modern, robust and well-equipped armed forces, they are likely to find themselves at a disadvantage when facing future crises. In this sense, defense is certainly not a superfluous expense: it is an investment in freedom and security.
